Also monitors line faults incase any cables become disconnected or damaged.

24/7 monitoring enables quick remedial action in the event of an alarm.

Alarm relays for connection to BMS or other external devices.

Supplied with an external beacon for maximum visual awareness in the event of an alarm.

Plant Room / Tank Room Environmental Detection Packages

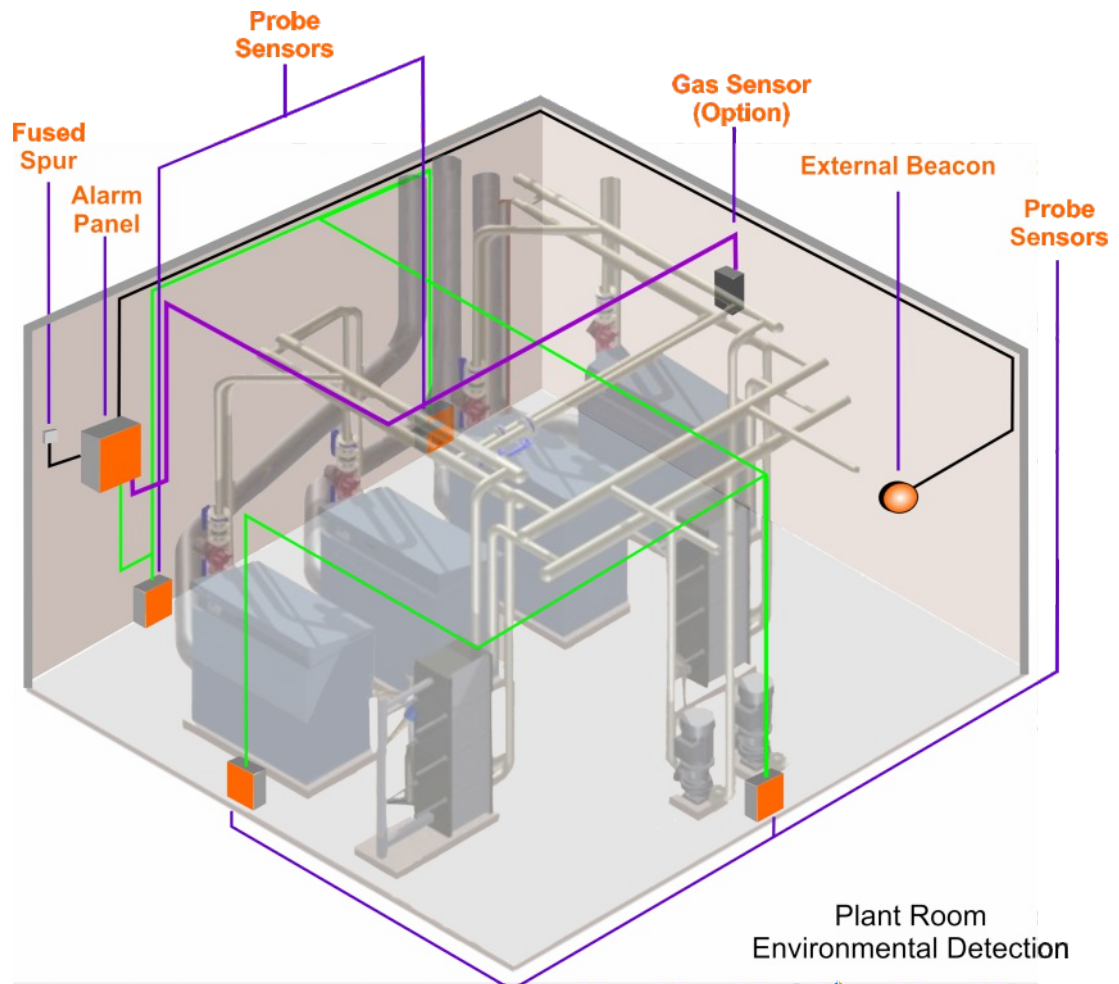

Protecting a plant room from water leaks can be of paramount importance for the continuity of services in a building. Plant rooms are often the point of entry for the mains water supply and contain many critical pieces of equipment essential for the supply of water, heat and cooling. Many plant rooms are located in basements or on upper floor levels, where an undiscovered leak could lead to equipment failure and water ingress to the floors below.

Fitting a Plant Room package will allow a vital early warning that there's been a water leak and allow early intervention to remedy the problem. The Plant Room package comes with 4 sensor probes connected to an alarm panel.

PACKAGE INCLUDES:

LeakStopper 1 Alarm
100m of connection cable
4 x Water Leak Sensor Probes
External beacon
2m flex to connect to 230VAC supply
5m flex to connect to beacon
